PROJECTS / OPEN-SOURCE

Pizza_Sales SQL Project | Link   *Data Analysis , SQL Query*
This SQL project focuses on analyzing and managing data related to pizza sales. The project aims to create a database schema that efficiently tracks customer orders, inventory, and sales transactions. By utilizing SQL queries, the project will provide insights into sales patterns, popular products, and inventory management, ultimately helping to optimize business operations and enhance decision-making for a pizza restaurant.

Coffee_Shop_Sales MS Excel Project | Link   *Dax , Pivot Table, Data Cleaning*
Welcome to the Coffee Shop Sales Analysis project! This repository contains an Excel workbook designed to analyze and visualize sales data for a coffee shop. Utilizing pivot tables, advanced Excel formulas, and interactive dashboards, this project provides comprehensive insights into sales performance and trends
Pivot Tables: Efficiently summarize and analyze large datasets to extract meaningful insights.
Excel Formulas: Employ a variety of formulas for calculations, data manipulation, and financial analysis.
Dashboard Creation: Interactive dashboards for visualizing sales trends, performance metrics, and key indicators.

Sales_Management_Dashboard Project Power BI | Link   *Data visualization , Transforming Data*
Power BI Project
Track the effectiveness of our sales managers with real-time performance metrics.
Compare sales targets against actual achievements to identify top performers.
Analyze key performance indicators to drive strategic decision-making and optimize sales strategies.
Visualize individual and team contributions to streamline sales operations and enhance productivity.
